PHONE (718) 433-1990

## CONTROLS: *Volume & Tone*

**THE SADOWSKY ELECTRIC NYLON GUITAR** can be used with any standard classical guitar string. However, we strongly recommend the GHS set #2390. The bass strings are smoother than normal to eliminate much of the string “squeak” which is common with standard strings. They are available from many online retailers. We have evaluated similar strings made by all the major string manufacturers and have found this GHS set to be the best.

For players who are not familiar with nylon strings, please note that new nylon strings continue to stretch for a long time and require frequent stretching and retuning. It is also common for wound strings, especially the D string to break spontaneously when the instrument is at rest (this almost never happens during playing).

The circuit in this guitar is of professional quality and designed for the least amount of noise. The pre- mium quality chip in this guitar has a battery life rated at 1,000 hours. Depending on use, this can mean a battery life of over one year. For professional players, we recommend installing a new battery (9-volt alkaline) every six months. Please note that the battery is being drained whenever the instrument is plugged in.

There is a shim under the Barbara Transducer/Saddle if you want to lower the action. We include an extra one if you need to raise the action. Please be very careful handling the pickups as it is delicate.

Roger Sadowsky
